Submitted on 7 Feb 2018

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

ADREAM : Energy Consumption Optimization through Dynamic Simulations for the development of a platform of Intelligent Energy Management

Ilias PAPAS, Christelle ECREPONT, Corinne ALONSO, Bruno ESTIBALS
 LAAS-CNRS, 7 Avenue du Colonel Roche, Toulouse, France
 Email : ipapas@laas.fr

Context and Objectifs

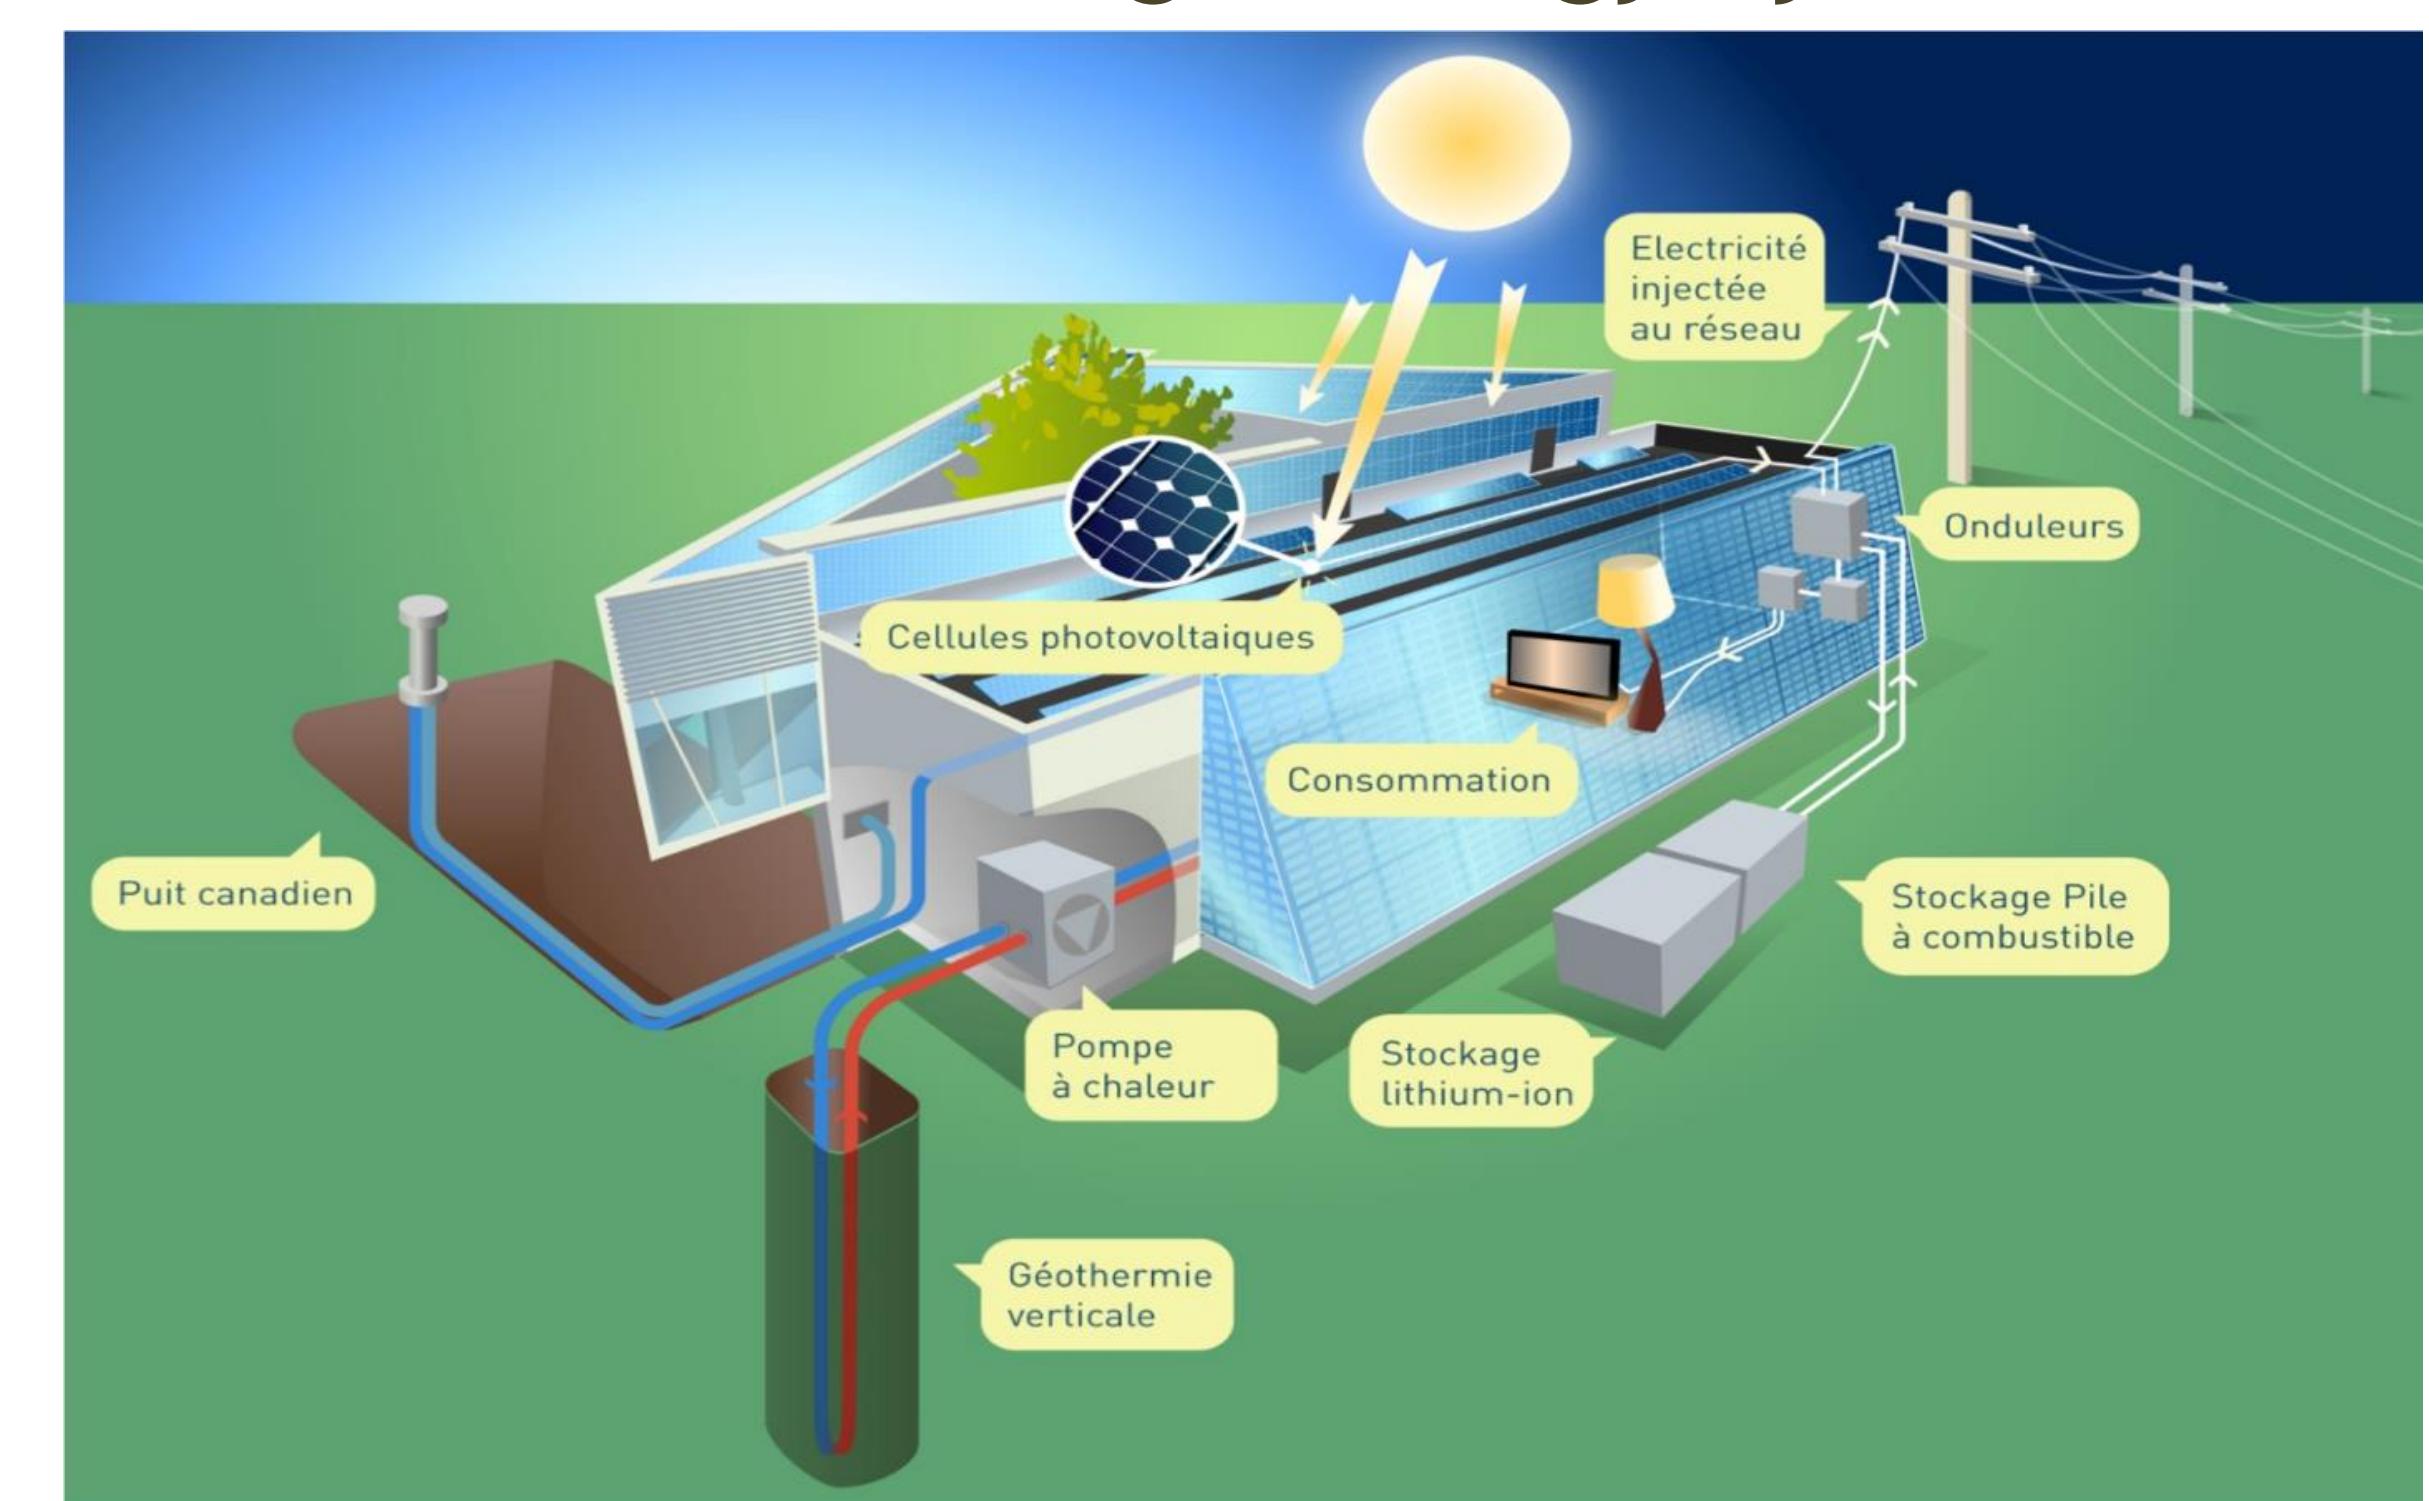

- Energy Optimization Project of the ADREAM Building

→ How can we optimize the ratio Consumption/Production with a focus on HVAC systems?

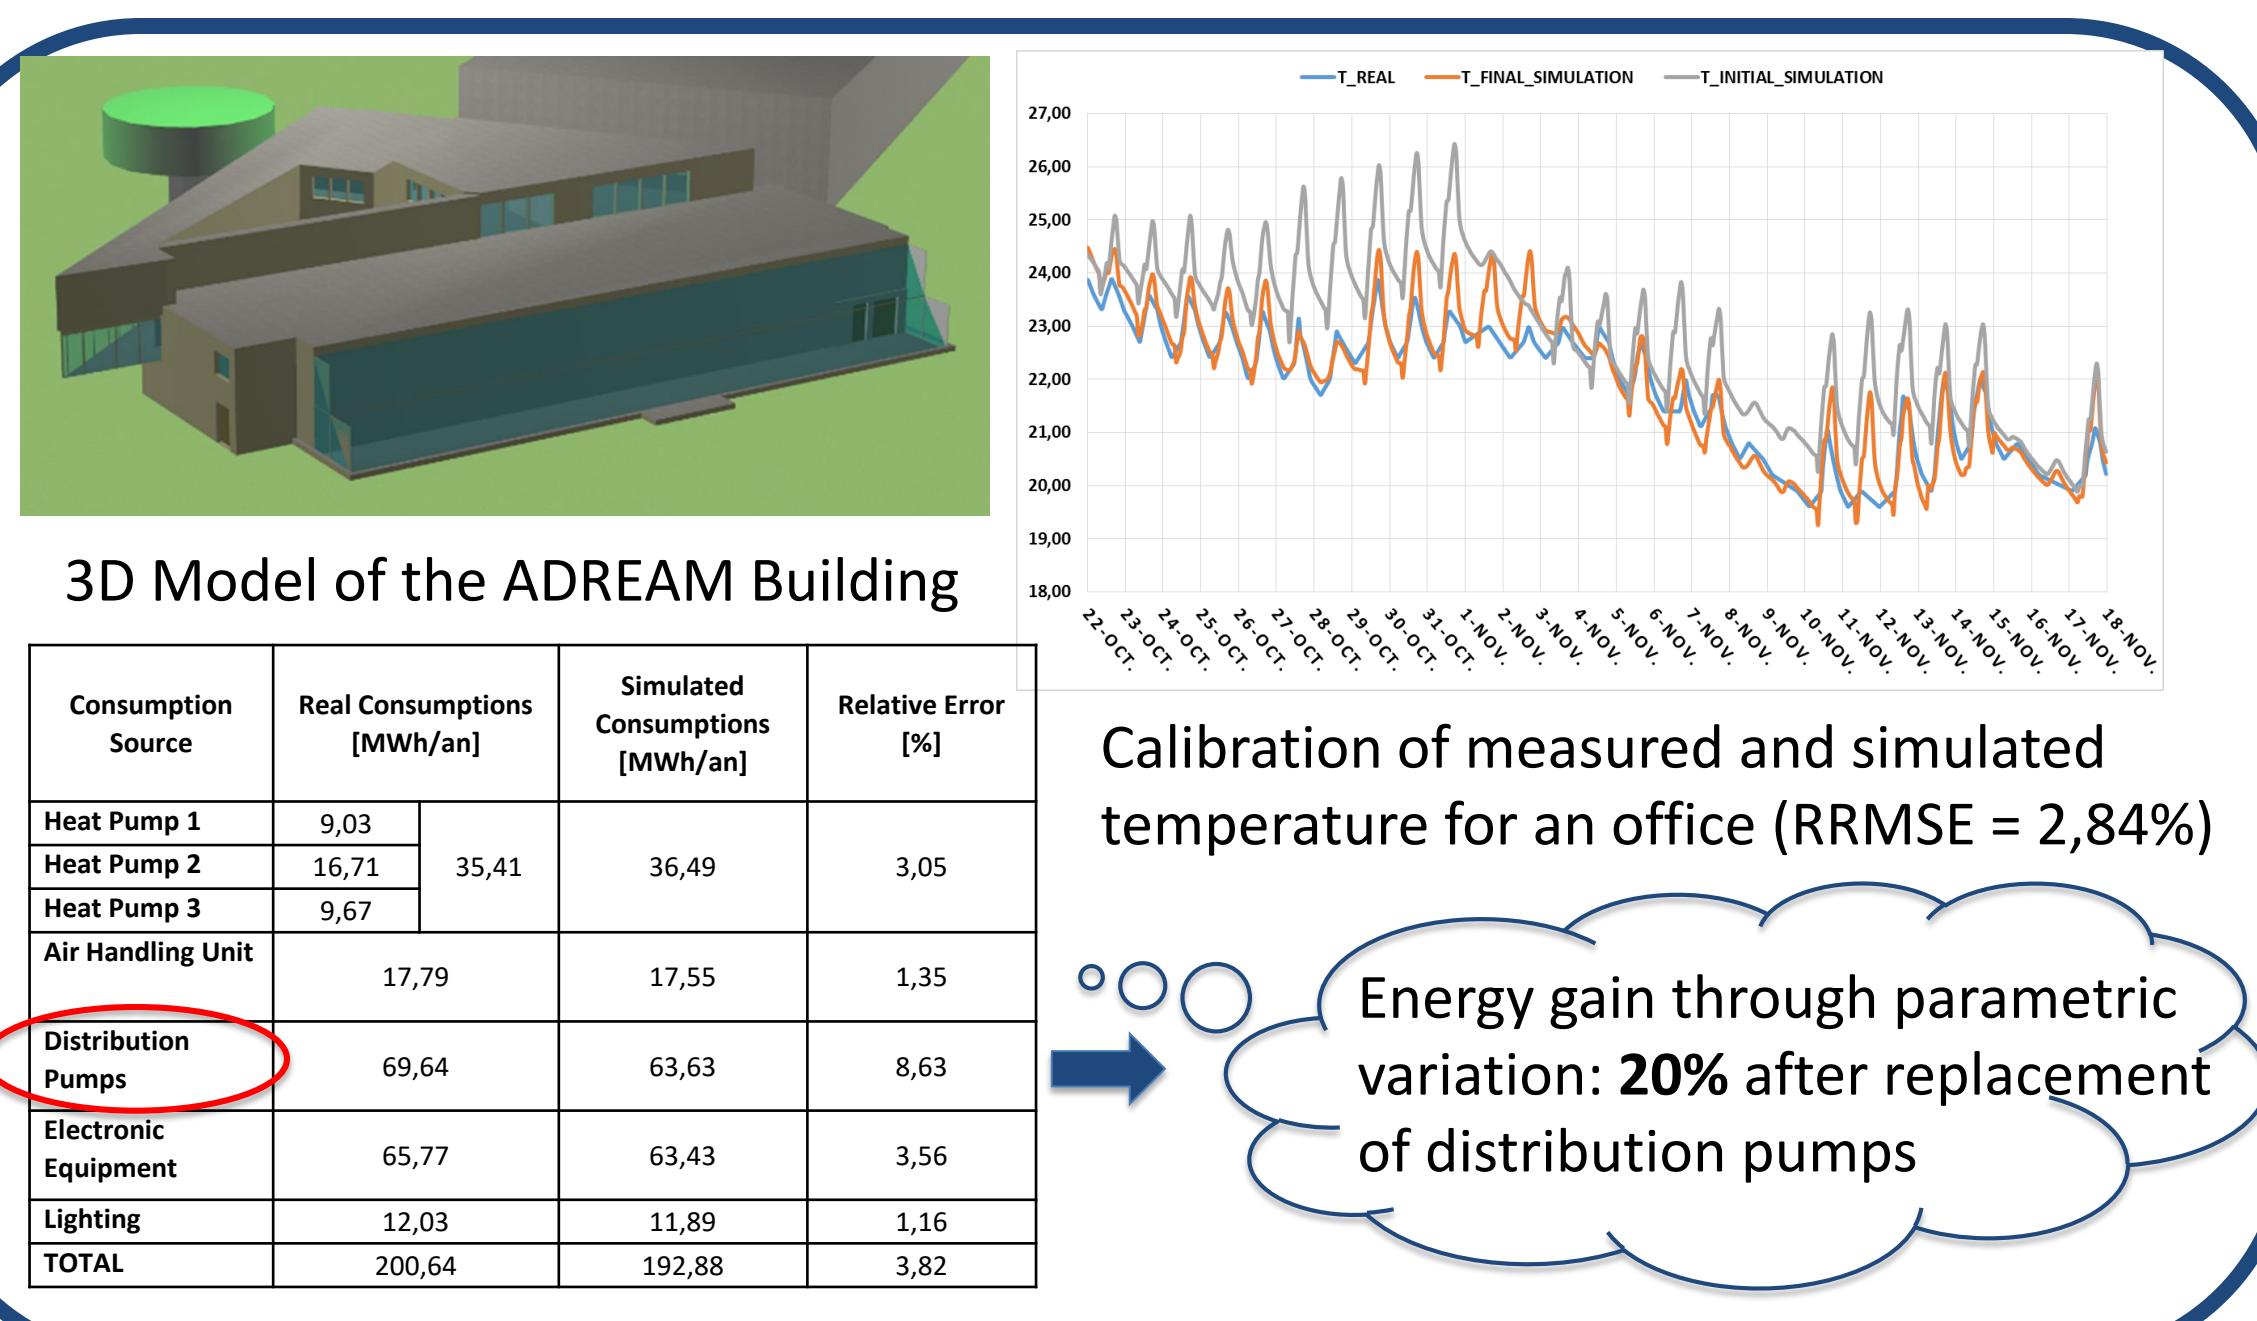

- Development of precise models
 - Identification of inputs and outputs for every modelled element
 - Model calibration with the use of sensors data
 - Prediction of the systems' electrical consumption
 - Optimization of the systems' regulation

ADREAM Building : Energy Systems

Dynamic Energy Simulations

Dynamic Thermal Simulation

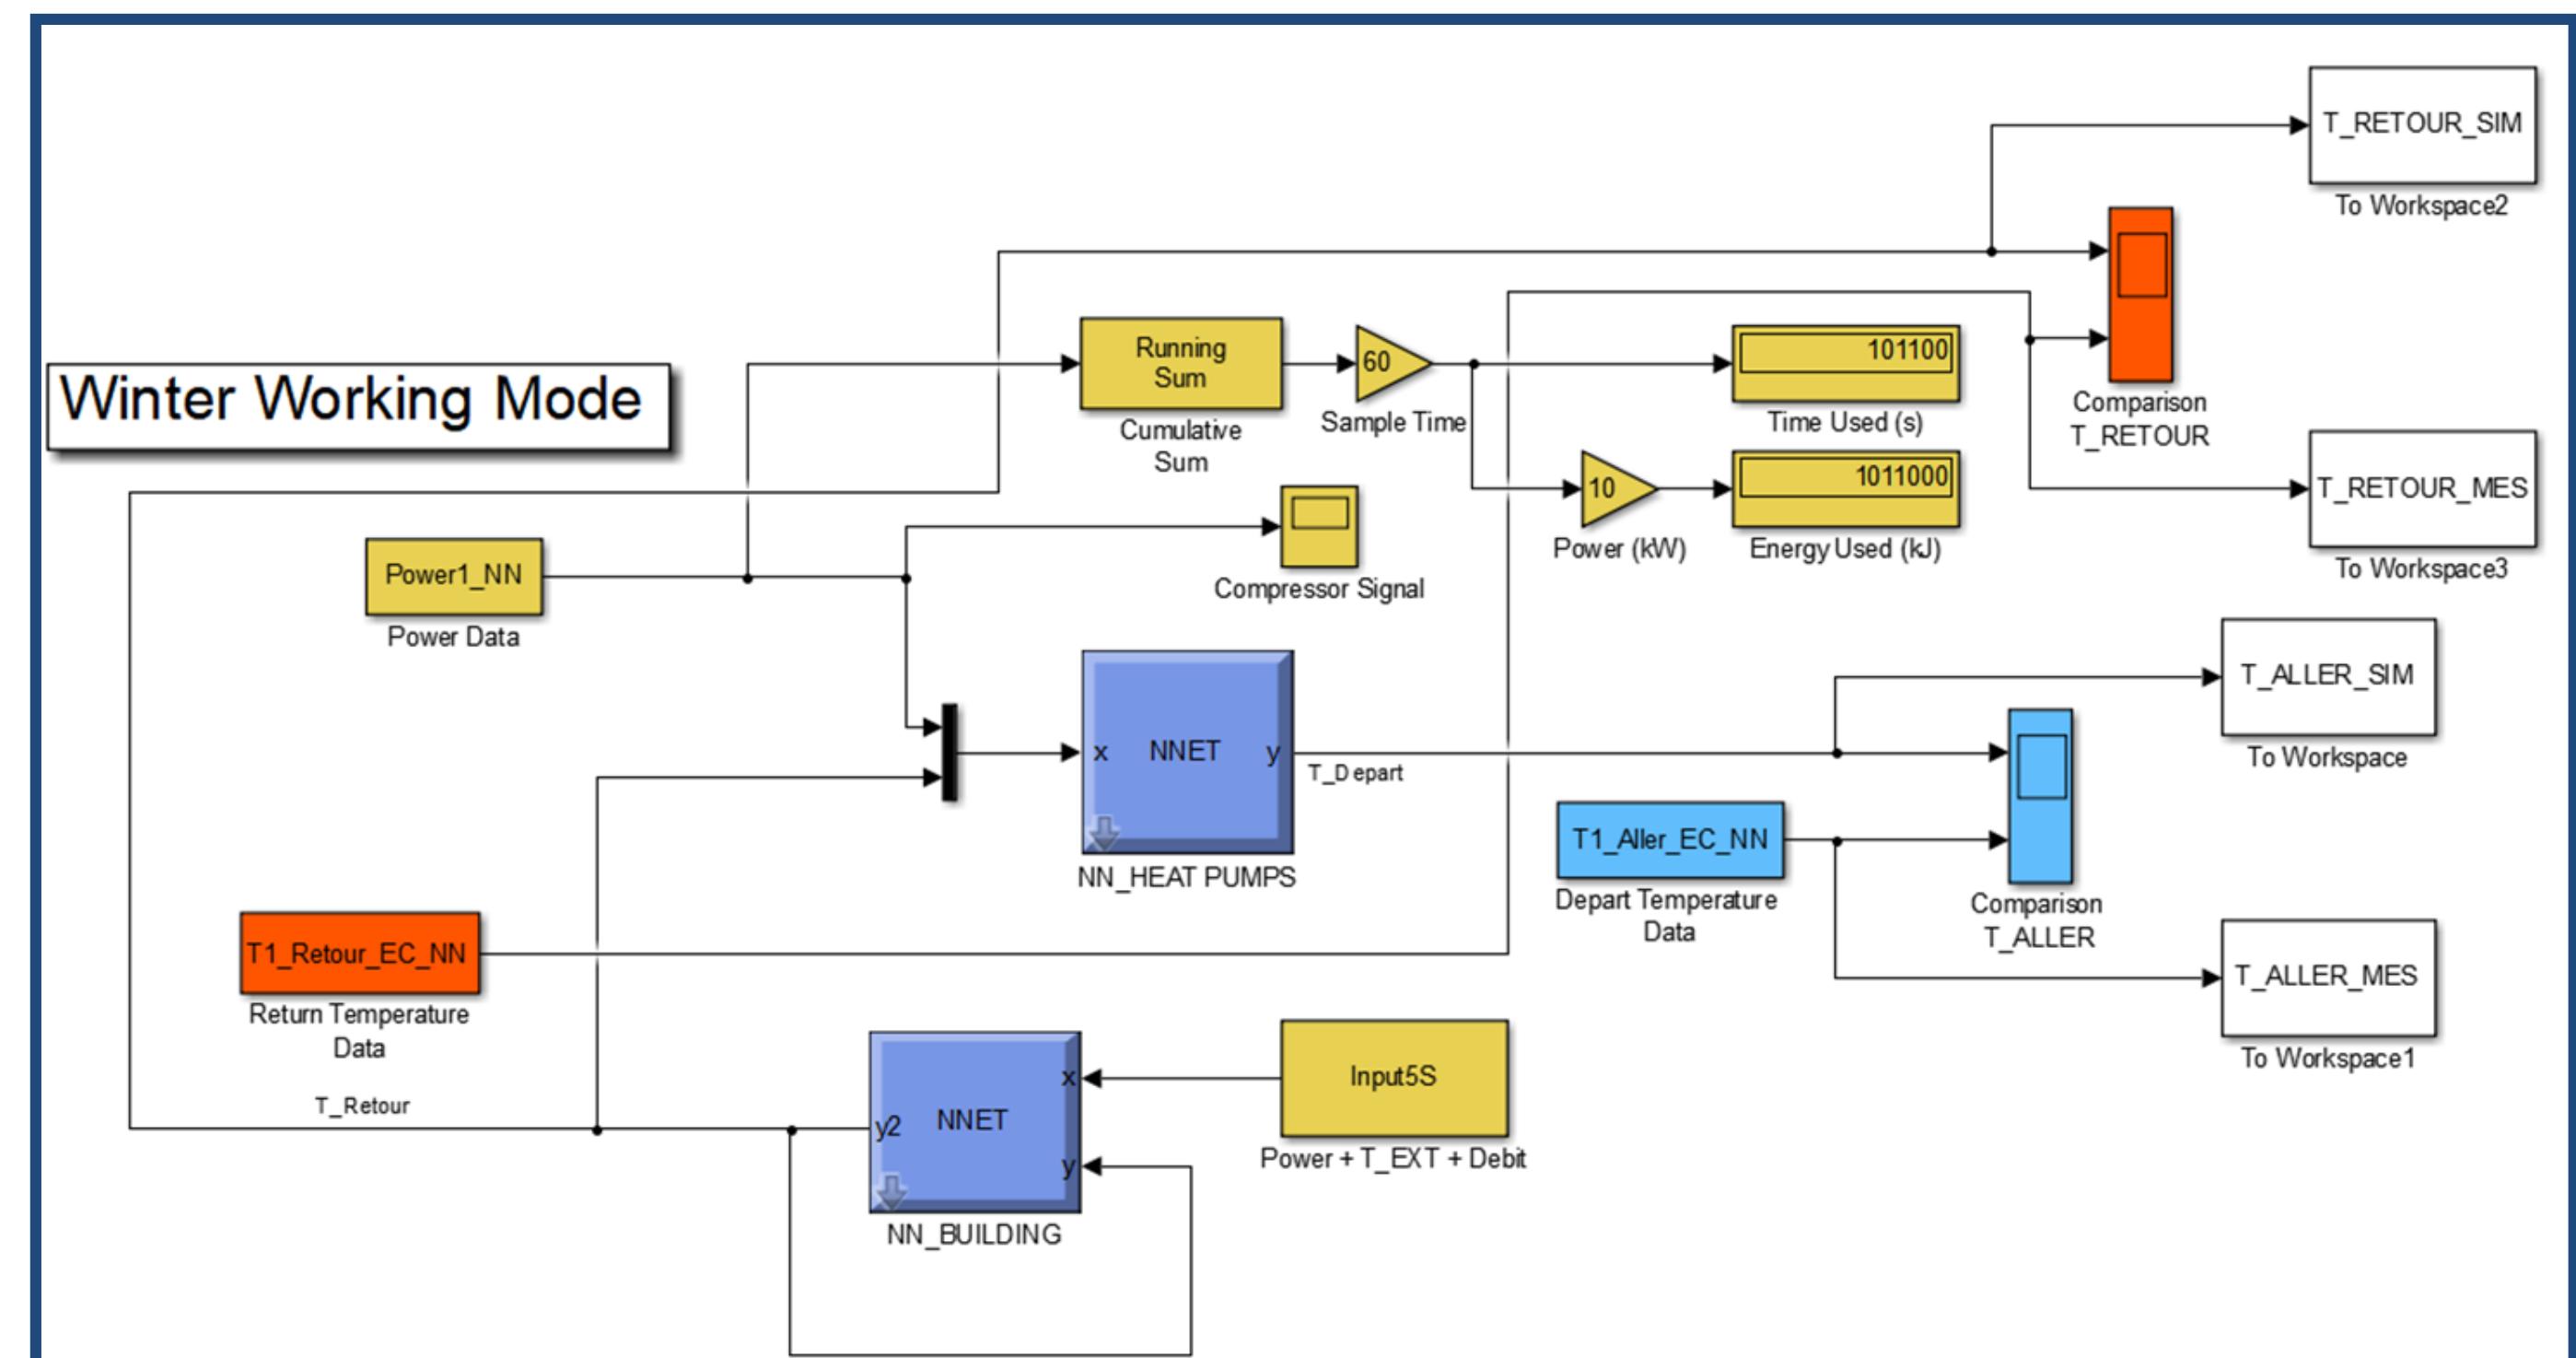

Comparison of the HVAC electrical consumption after the replacement of the pumps

	2014		2017	
	Consommations CVC [MWh]	T° Ext [°C] Min/Moy/Max	Consommations CVC [MWh]	T° Ext [°C] Min/Moy/Max
Fevrier	10,1	5,5/10,52/17,1	9,9	5,6/11,12/16,9
Mars	11,48	6,3/12,73/20,4	9,69	7/12,99/21,7
Avril	9,63	Max 22,6	8,18	7,3/14,69/23
Mai	11,95	10,9/16,71/23,5	8,59	11,3/18,76/29,4
TOTAL	43,16		36,36	
Gain Energétique			15,8%	

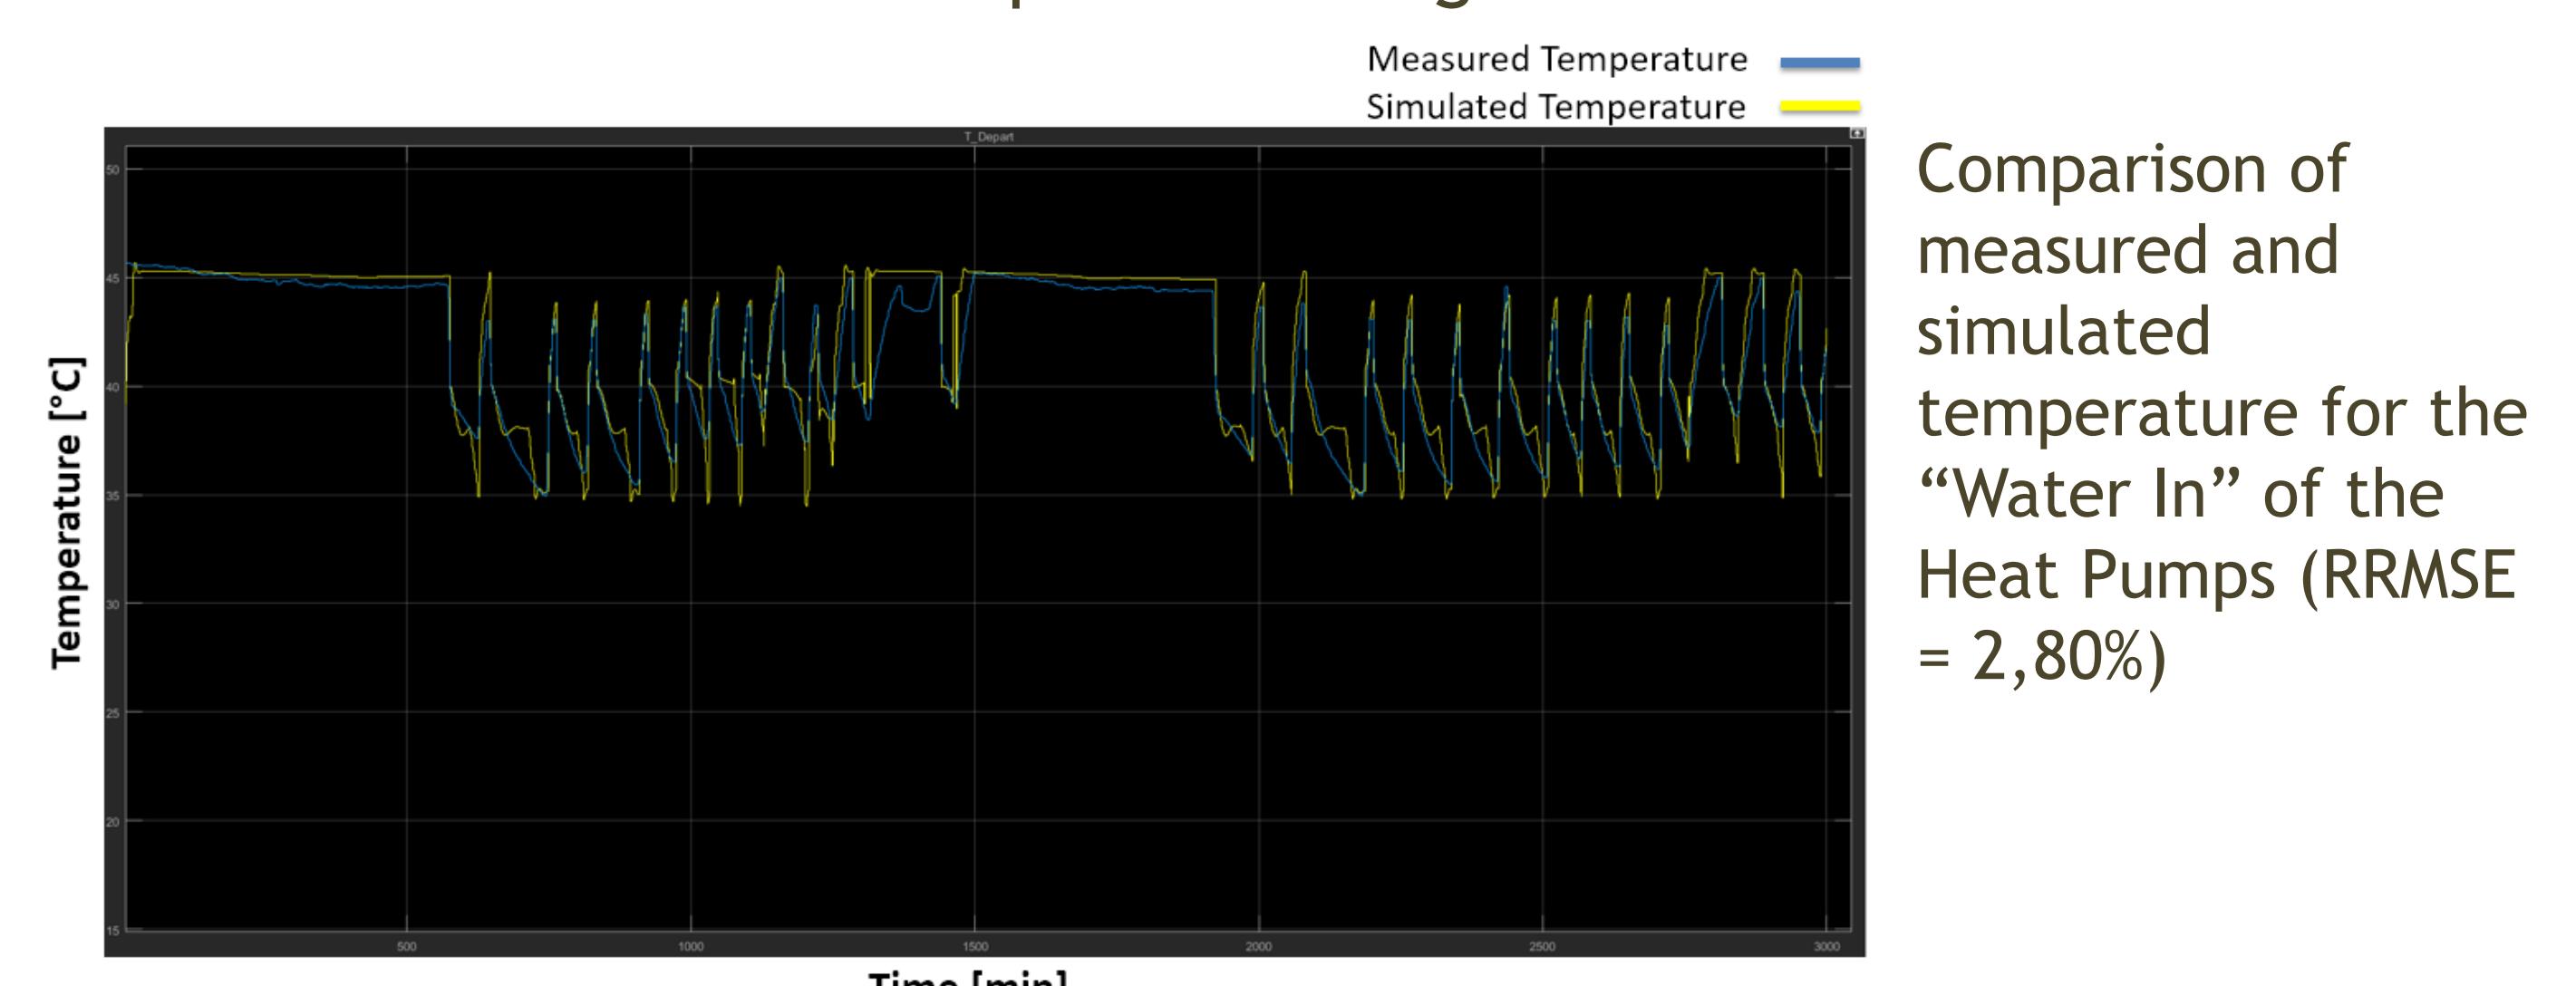

Model Methodologies Tested

- Physical Modeling of the HVAC Systems
- “Black Box” Modeling
- Artificial Neural Networks Modeling
- Hybrid Modeling (Simulink)

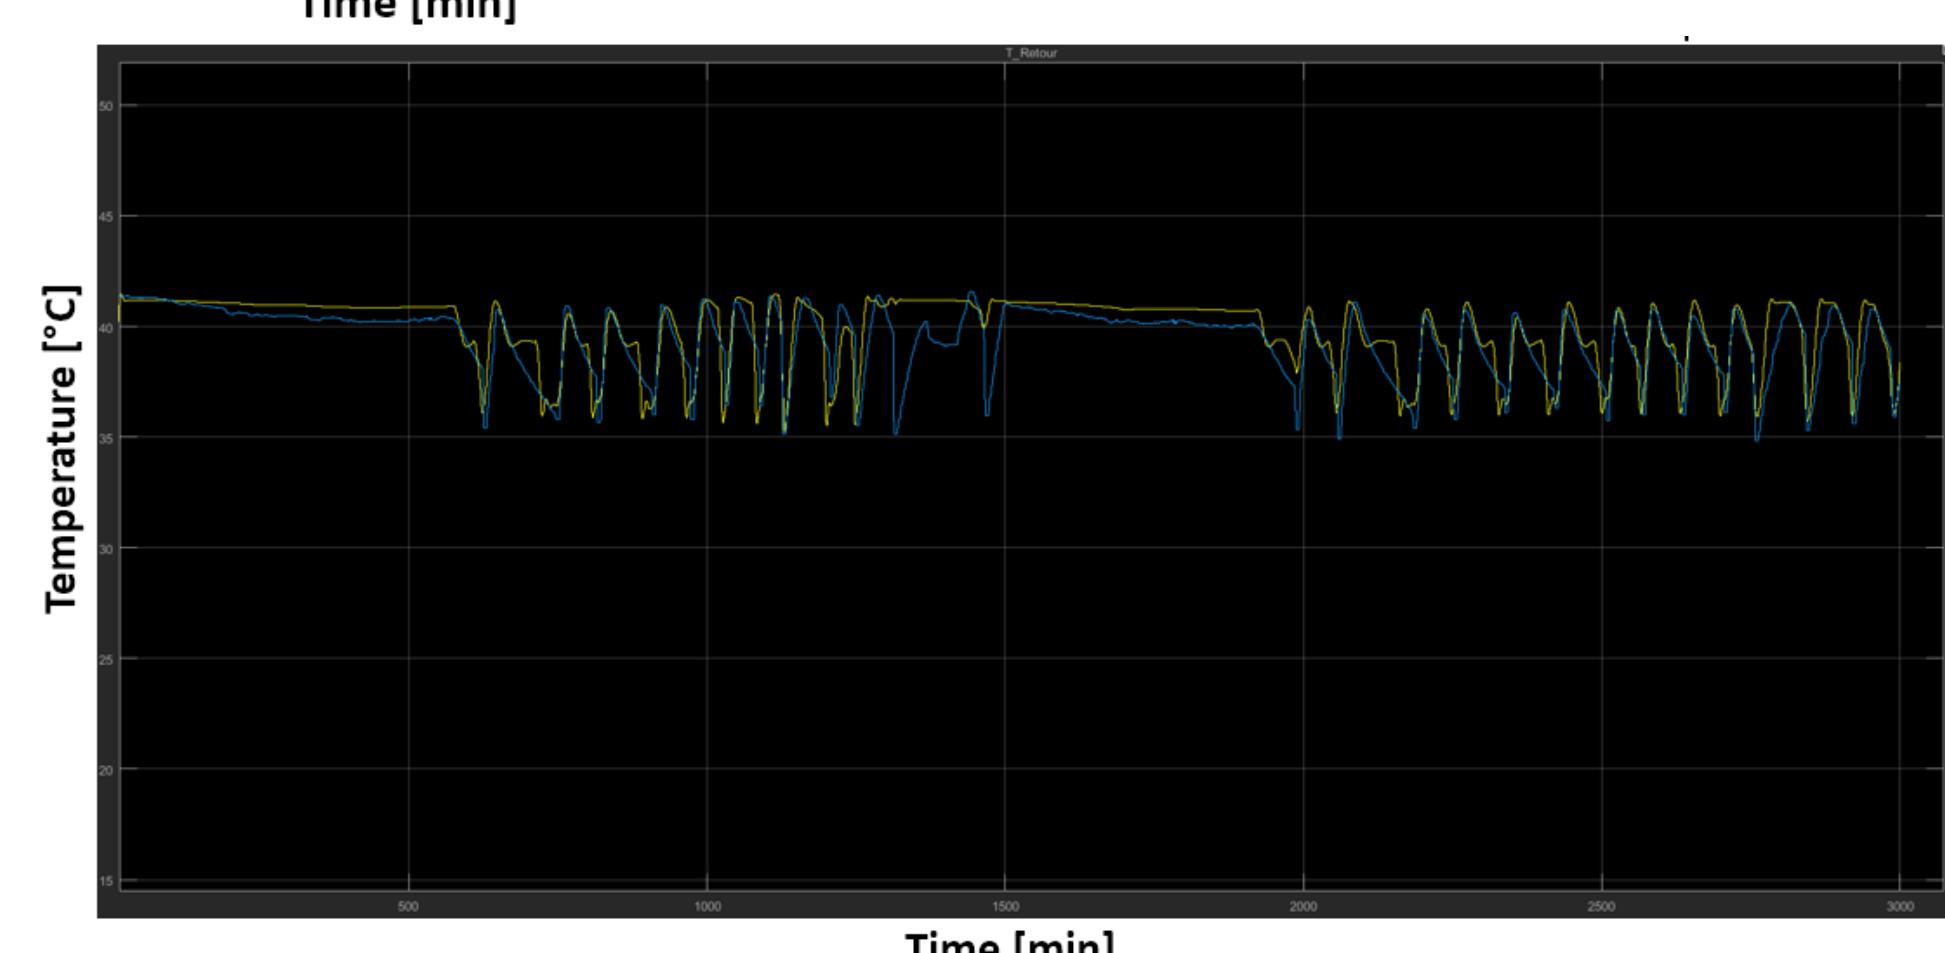

“Heat Pumps + Building” Model in Simulink

Prediction of “Water Out” and “Water In” temperatures of the Heat Pumps on heating mode

Comparison of measured and simulated temperature for the “Water Out” of the Heat Pumps (RRMSE = 2,69%)
